

Your whole insurance program, in one place.

One live command centre for the assets, people, policies, coverage gaps, renewals and claims your company insures — across every business unit. On your servers or on SAIBA Cloud.

THE PROBLEM

Sound familiar?

Corporate insurance still runs on spreadsheets. Policies sit with different brokers, assets and people live in separate registers, renewals creep up unseen — and coverage gaps are discovered at claim time, when it is too late. Nobody has the single view the CFO keeps asking for.

WHY SAIBA CORPORATE

A command centre for corporate insurance — not another broker tool.

One live system of record

Every unit, location, asset, employee and policy in one place — current, connected, searchable.

Gaps found before a loss

Cover rules by asset class or employee band flag what is under-insured or not insured at all.

Renewals that never slip

A pipeline with aging buckets, follow-ups and status — from data collection to placement.

THE PLATFORM

Everything your program needs.

Risk register

Business units, locations, assets (tracked or bulk), stock declarations, people with dependants — PII encrypted at rest. Excel & ERP/SAP import.

Cover & coverage gaps

Insurance-setup rules by asset class or by employee primary group, category, grade, role or salary band — and the gap report they drive.

Quotes & placement

RFQs, insurer comparison and an approvals matrix; policies across every class; endorsements; premium performance and budgets; multi-currency with FX.

Renewals & claims

The renewals pipeline with follow-ups, and claims for assets and people (cashless and reimbursement) with full status history.

Specialist lines

Marine open covers with shipment declarations, travel rate cards and travel policies, float management.

People & portal

Employee self-service portal, WhatsApp integration and e-sign — so group cover runs itself.

WHO IT'S FOR

Built for organisations with a lot to insure.

Multi-site enterprises

Plants, warehouses, offices and fleets across units — one consolidated view of exposure and cover.

The insurance owner

The risk, finance or admin head who fields every renewal, claim and “are we covered?” question.

Group CFO & captives

Board-ready reporting on premium, exposure, claims ratio and effective rate — across the group.

THE PAYOFF

What changes when it's all in one place.

Fewer gaps

Under-insurance and uncovered assets found and closed before a loss does.

No missed renewals

A pipeline that makes a silent lapse impossible.

Faster claims

Every claim visible and moving — intimation to settlement.

Board-ready insight

Total sum insured, claims ratio and spend by unit, on demand from live data.

SECURITY & DEPLOYMENT

Security first. Deploy your way.

Sensitive data is encrypted at rest and in transit, access is role-based and tenants are strictly isolated. Run it on **your own servers** for full data residency, or on **SAIBA Cloud** — the same platform either way.
